

2 Channel RS485-Sensor-Interface SI-RS485 with Configuration and Evaluation Software

Performance Features

- Fast measurement of up to 2500 meas./s per measurement channel
- Up to 16 bit resolution
- Input ranges for mV, V and mA
- Full synchronism of both measuring channels
- Input ranges combinable with each other
- Adjustment and control trigger via software

Application

- Research and development
- Process measuring and control technology
- Automotive engineering
- Energy and environmental technology
- Mechanical engineering

Description

The sensor interface SI-RS485 is connected between sensor and PC. In this way, analog sensor signals will be digitized with up to 16 bit resolution.

By the measuring rate of 2500 measurements/s per measuring channel, high-dynamic measurements can be achieved. The measured values are transferred to the PC via the RS485 interface and visualized by means of software. If a control signal is integrated in the sensor, an automatic adjustment can be carried out and checked at any time (measuring chain monitoring).

Following sensor output signals can be digitally converted and conveniently displayed and evaluated via the free evaluation software:

.../DMS Input Range ± 3 mV/V
(Strain gauges) (Excitation 5V \leq 20 mA)

.../U5/U10 Input Range ± 5 V/ ± 10 V
(Sensor supply 12V \leq 200 mA)

.../I20

Input Range 0/4 ... 20 mA
(Sensor supply 12V \leq 200 mA)

Many standard sensors, such as force-, torque-, displacement or pressure sensors can be used with the SI-RS485. The sensor parameters can be stored in the SI-RS485. After a single parameterization, each sensor is automatically recognized by the software.

The voltage supply of the SI-RS485 is provided by an external mains adapter. Through the measuring amplifier, the connected sensors are being directly supplied with voltage, whereby a separate voltage of the sensors has been omitted.

Unwanted frequencies are filtered with the second-order low-pass filter. Here you can distinguish between 4 cutoff frequencies.

The connection to LabVIEW or the integration into internal programs is possible with the freely available driver package.

² Lorenz-Standard:

- Supply voltage 5V, calibration range ± 1 mV/V in 10 steps, calibration range ± 2 mV/V in 10 or 20 steps
- Language of the Certificate: German and English
- Calibration at DC: Normal K3608, if so display above Keithley 2000 or Lorenz VS3 (Lorenz amplifier with USB interface)
- Calibration at 225 Hz: Normal K3608, if so display above HBM MGCplus + ML38
- Calibration at 225 Hz: Normal BN100A, if so display above HBM DMP40

Configuration and Evaluation Software VS3

The configuration and evaluation software serves for easy evaluation and graphical visualisation of the evaluated data on a PC.

The software allows direct read-in of measured data into a text file in CSV-format through the RS485 interface. This enables further analyses with a commercially available spreadsheet program at any time.
