

2 Channel Ethernet-Sensor-Interface SI-ETH with Configuration and Evaluation Software

Performance Features

- Fast measurement of up to 2500 meas./s per measuring channel
- Up to 16 bit resolution
- Input ranges for mV, V and mA
- Full synchronism of both measuring channels
- Input ranges combinable with each other
- Adjustment and control trigger via software
- Voltage supply via PoE or separate mains adapter

Description

The sensor interface SI-ETH connects sensor and PC through an IP-based Ethernet. In this way, analog sensor signals will be digitized with up to 16 bit resolution.

By the measuring rate of 2500 measurements/s per measuring channel, high-dynamic measurements can be achieved. The measured values are transferred to a PC via the Ethernet interface and visualized by means of software. If a control signal is integrated in the sensor, an automatic adjustment can be carried out and checked at any time (measuring chain monitoring).

Following sensor output signals can be digitally converted and conveniently displayed and evaluated via the free evaluation software:

.../DMS Input Range ± 3 mV/V
(Strain gauges) (Excitation 5V ≤ 20 mA)

.../U5/U10 Input Range $\pm 5V/\pm 10V$
 (Sensor supply 12V ≤ 200 mA)

Application

- Research and development
- Process measuring and control technology
- Automotive engineering
- Energy and environmental technology
- Mechanical engineering

.../I20

Input Range 0/4 ... 20 mA
(Sensor supply 12V ≤ 200 mA)

Many standard sensors, such as force-, torque-, displacement or pressure sensors can be used with the SI-ETH. The sensor parameters can be stored in the SI-ETH. After a single parameterization, each sensor is automatically recognized by the software.

The voltage supply of the SI-ETH is provided by an external mains adapter or with PoE via the network cable. Through the measuring amplifier, the connected sensors are directly supplied with voltage, so a separate supply of the sensors is omitted.

Unwanted frequencies are filtered with the second-order low-pass filter. Here you can distinguish between 4 cutoff frequencies.

The connection to LabVIEW or the integration into internal programs is possible with the freely available driver package.

³ Lorenz-Standard:

- Supply voltage 5V, calibration range ± 1 mV/V in 10 steps, calibration range ± 2 mV/V in 10 or 20 steps
- Language of the Certificate: German and English
- Calibration at DC: Normal K3608, if so display above Keithley 2000 or Lorenz VS3 (Lorenz amplifier with USB interface)
- Calibration at 225 Hz: Normal K3608, if so display above HBM MGCplus + ML38
- Calibration at 225 Hz: Normal BN100A, if so display above HBM DMP40

Configuration and Evaluation Software VS3

The configuration and evaluation software serves for easy evaluation and graphical visualisation of the evaluated data on a PC.

The software allows direct read-in of measured data into a text file in CSV-format through the Ethernet interface. This enables further analyses with a commercially available spreadsheet program at any time.

System requirements	Windows® 7 - 10 32/64 Bit ⁵ Dual-Core from 1.8 GHz (with diagram)

Highlights at a glance

Conversion in physical values	✓
Simultaneous measuring	Up to 2 input channels with SI-ETH
Automatic scaling of y-Axis	✓
Graphical display of the measured variables	✓
Automated or manual storage in a CSV- and BMP-file	✓
Print-out of the diagram with date and definable superscription	✓
Scaling function of the input variable to any display value with unit	✓
Resettable minimum value memory for each measured value	✓
Resettable maximum value memory for each measured value	✓
Floating averaging	✓
Simple evaluations (OK/NOK)	✓
Tara for each measured Size	✓
